

CHIP Chair
Antti Kotilainen

CHIP CHAIR With clean, graceful lines that curve rhythmically like the crest of a wave, the CHIP stacking chair was inspired by the sea in motion. CHIP is constructed of melamine-covered molded birch sheets on a chrome-plated steel frame. Deceptively light, the seat and back are comprised of 27 layers of veneer, resulting in increased strength and durability. Available in both arm and armless versions, CHIP can be specified in a wide range of vibrant and neutral colors including natural birch, white, red, orange, grey, black and blue. An optional seat pad is available for added versatility. CHIP is perfect for cafeterias, conference rooms and as a side chair for the office. CHIP stacks 12-high or 20 on a dolly for convenient storage.

ANTTI KOTILAINEN Born in Helsinki, Finland, young product designer Antti Kotilainen has created a variety of products for both residential and contract applications. Kotilainen was educated at Finland's esteemed Lahti Design Institute and was the recipient of the Chicago Athenaeum Museum of Architecture and Design's prestigious Good Design Award in 2002. A versatile designer who values practicality, experimentation and intuition, he says of his craft: "A writer writes on life, a designer designs on life."
